

Standby Power Saver

The Standby Power Saver is an easy to use plug socket that turns off electrical devices to save energy that would otherwise be used on standby. This unique product automatically switches off power to all other devices when the TV or computer has been switched off or put on standby.

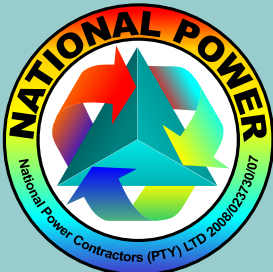

The Standby Power Saver is designed to save standby energy to help save money and help reduce carbon emissions to the environment. The Standby Power Saver is the first universal product able to work for both TV sets and computers. The product complies with all types of devices - from small LCD TV sets and laptop computers to the large plasma or LCD screens and powerful micro computers. It works with all types of screen technology and computers (i.e. PC and MAC).

Surge Protection

The Standby Power Saver has built-in surge protection to protect all electrical devices from power surges - and prevents damage to the TV and/or computer applications, while saving data and minimising the risk of fire to the appliances.
